Nakhon Pathom Rajabhat University

# Outline

- Introduction
- Current mirror
- Active load
- Small signal equivalent circuit

# Current mirror

- วงจรสะท้อนกระแส (current mirror) คือการสะท้อนกระแสอ้างอิง และกระแส อินพุตไปที่เอาต์พุตของวงจร

$$I_B = I_D = K_N \left( V_{GS1} - V_{TH} \right)^2 \left( 1 + \lambda V_{DS1} \right)$$

$$I_{out} = K_N \left( V_{GS2} - V_{TH} \right)^2 \left( 1 + \lambda V_{DS2} \right)$$

$$I_{REF} = K_{N1} \left( V_{GS1} - V_{TH} \right)^2$$

$$I_{out} = K_{N2} \left( V_{GS2} - V_{TH} \right)^2$$

$$\frac{I_{out}}{I_{REF}} = \frac{K_{n2} (V_{GS2} - V_{TH2})^2}{K_{n1} (V_{GS1} - V_{TH1})^2}$$

$$I_{out} = [K_{N2} / K_{N1}] I_{REF}$$

Ex. 1 จงหา  $i_{out}$  กำหนดให้  $K_{N1} = K_{N2} = 0.1\text{mA}/\text{V}^2$  และ  $I_{REF} = 1\text{ mA}$

$$I_{out} = \left[ K_{N2} / K_{N1} \right] I_{REF}$$

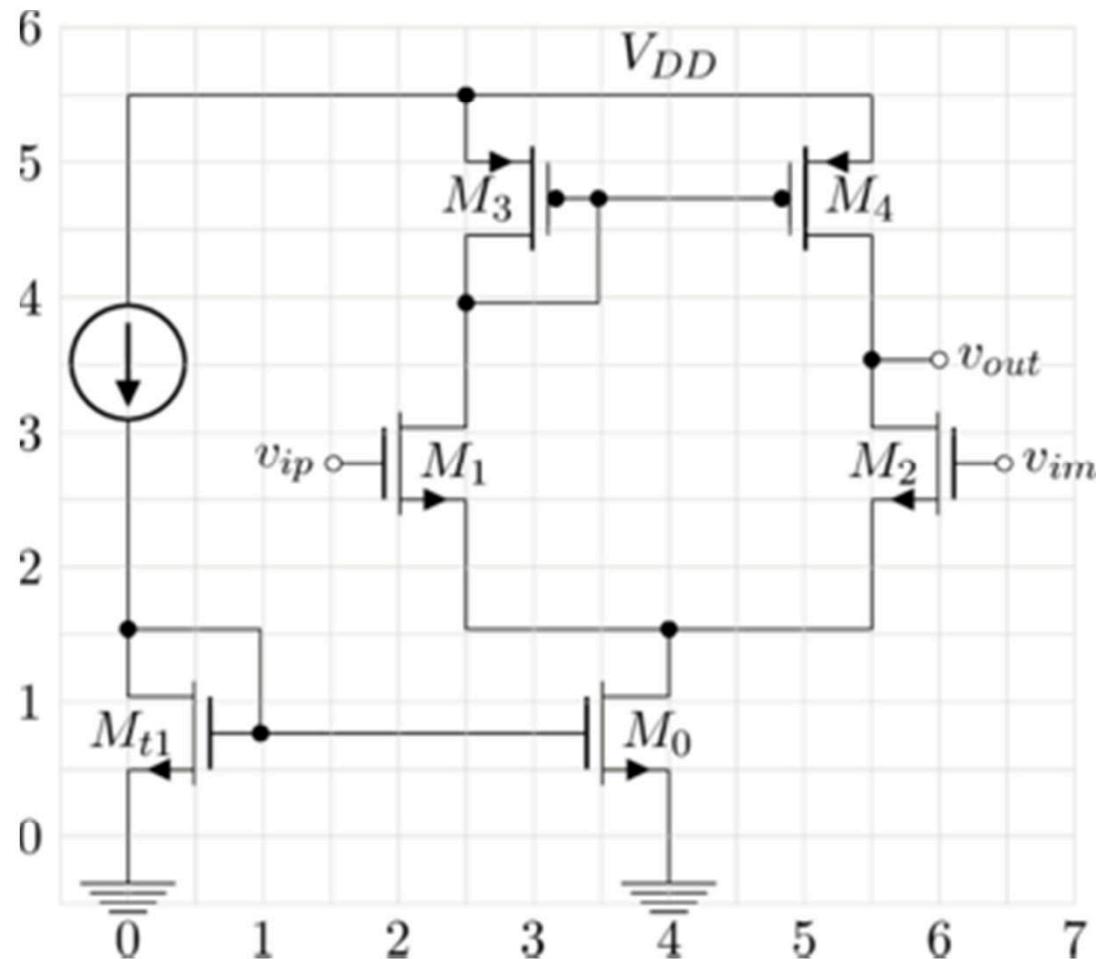

$$I_{out} = I_{REF} = 1mA$$

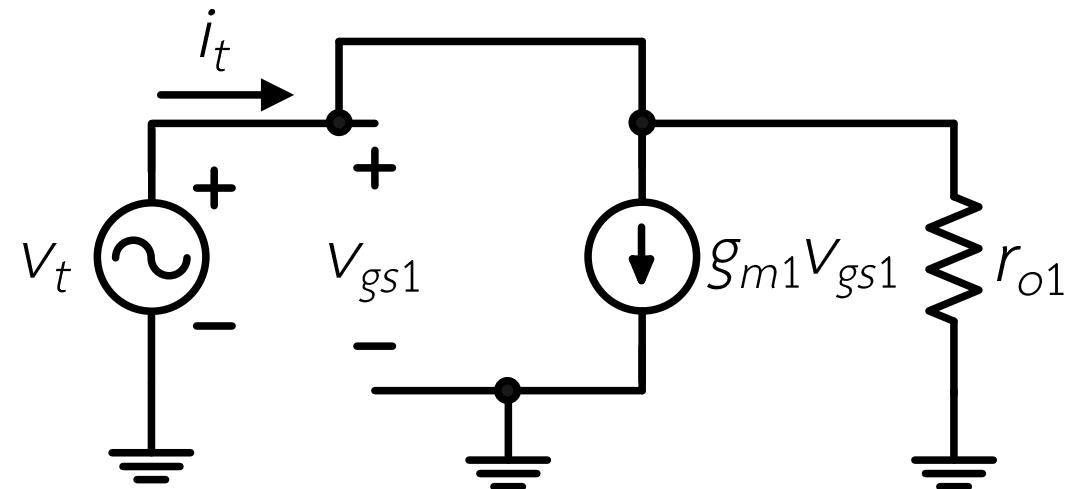

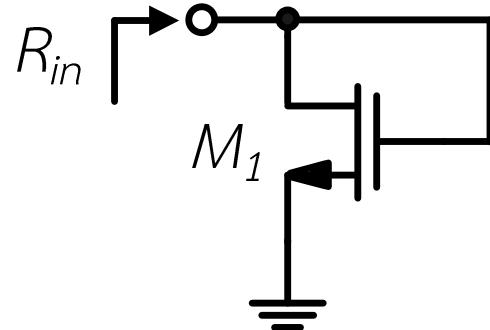

Ex. 2 จงหา  $i_{out}$  กำหนดให้  $K_{N2} = 2K_{N1}$   $0.1mA/v^2$  และ  $I_{REF} = 1 mA$

$$I_{out} = \left[ K_{N2} / K_{N1} \right] I_{REF}$$

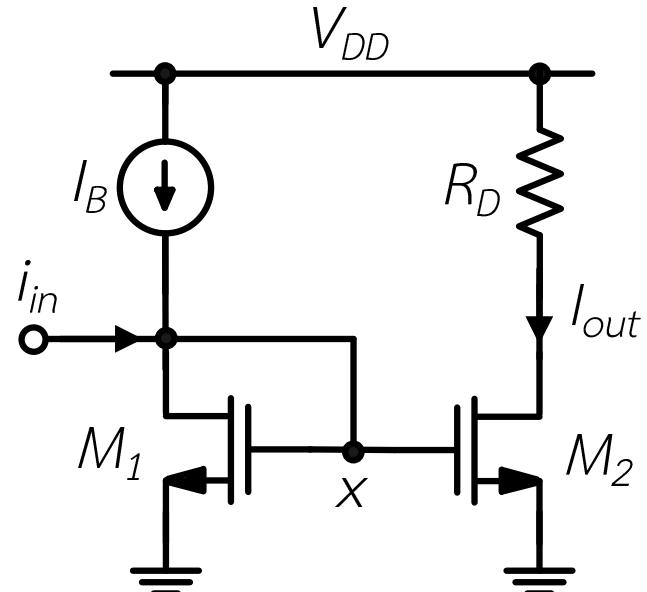

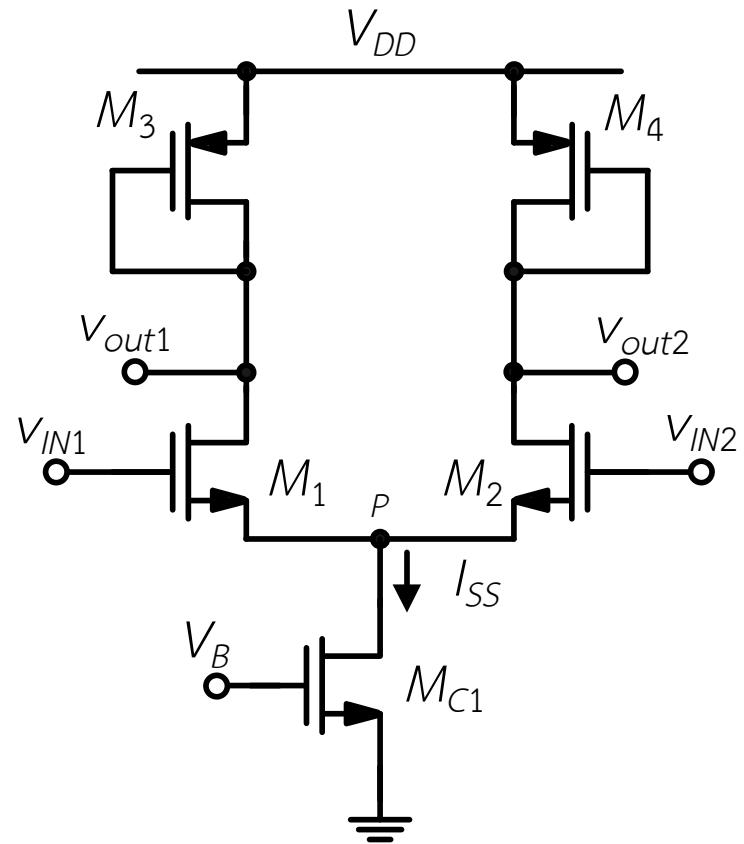

$$I_{out} = \left[ 2K_{N1} / K_{N1} \right] I_{REF}$$

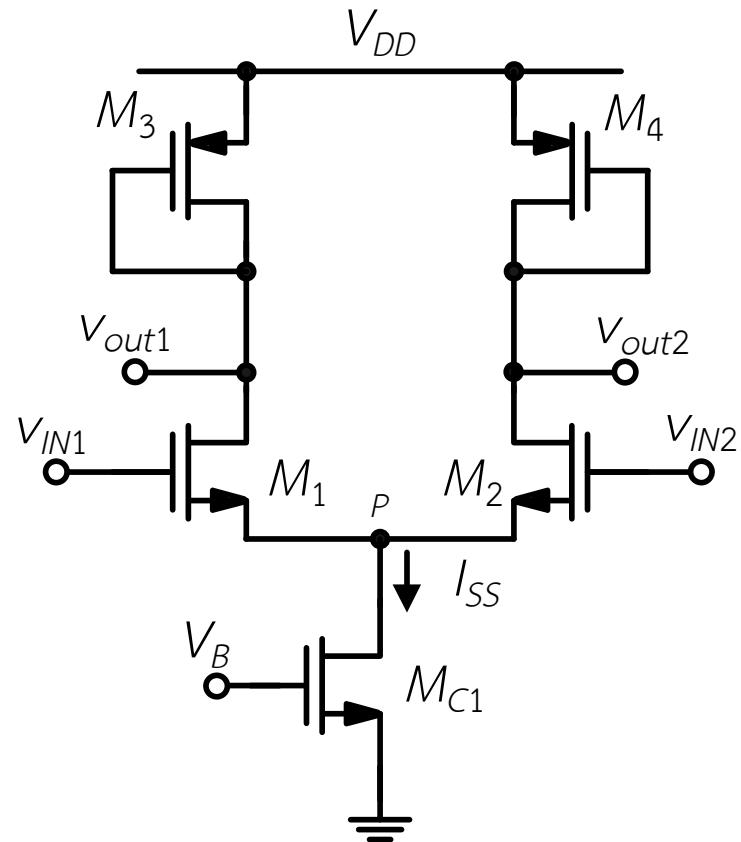

$$I_{out} = 2I_{REF} = 2mA$$

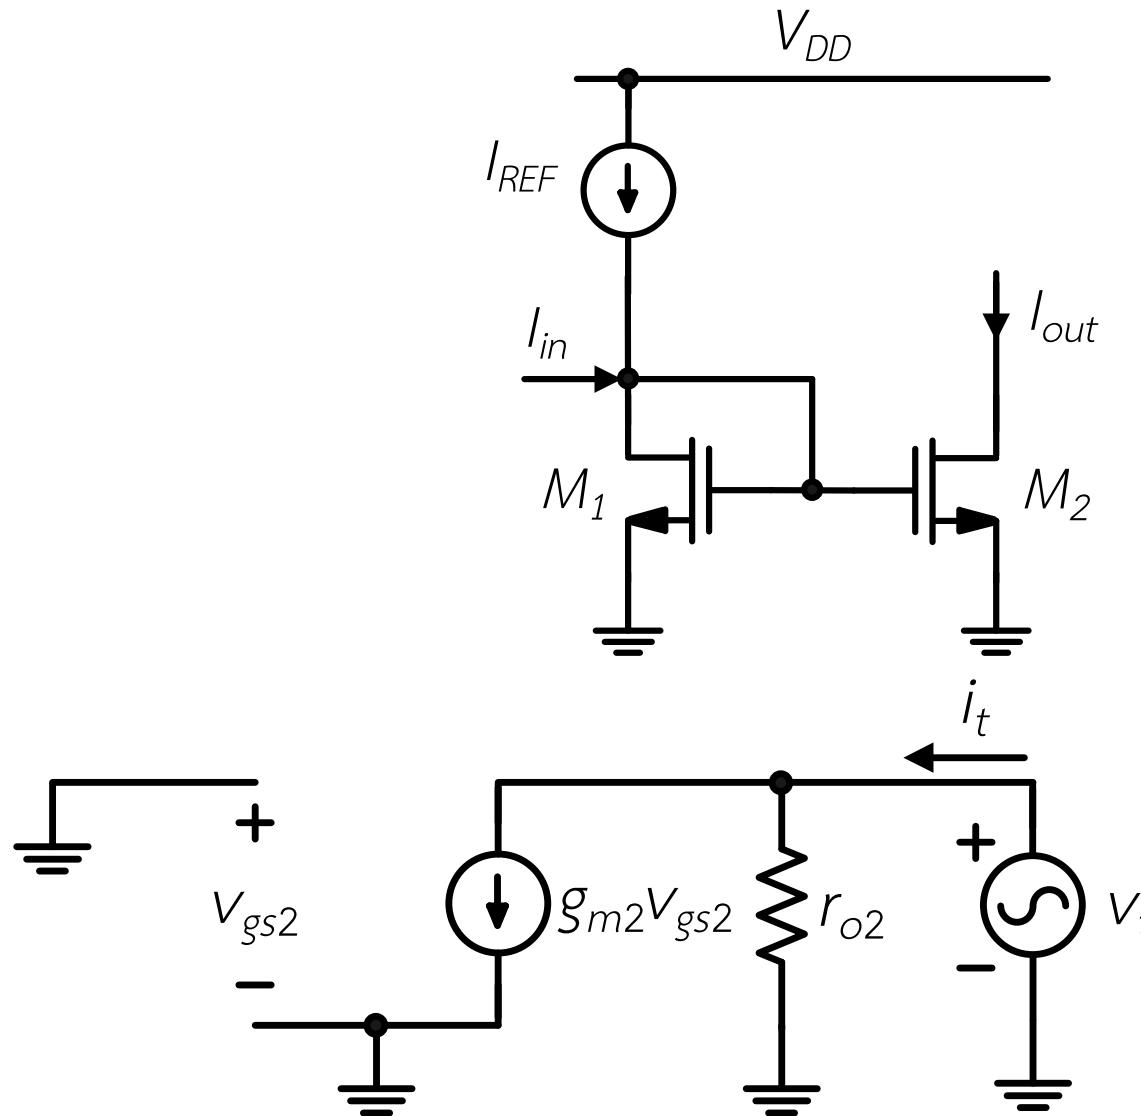

$$R_{in} = \frac{V_t}{i_t} = \frac{1}{g_{m1}}$$

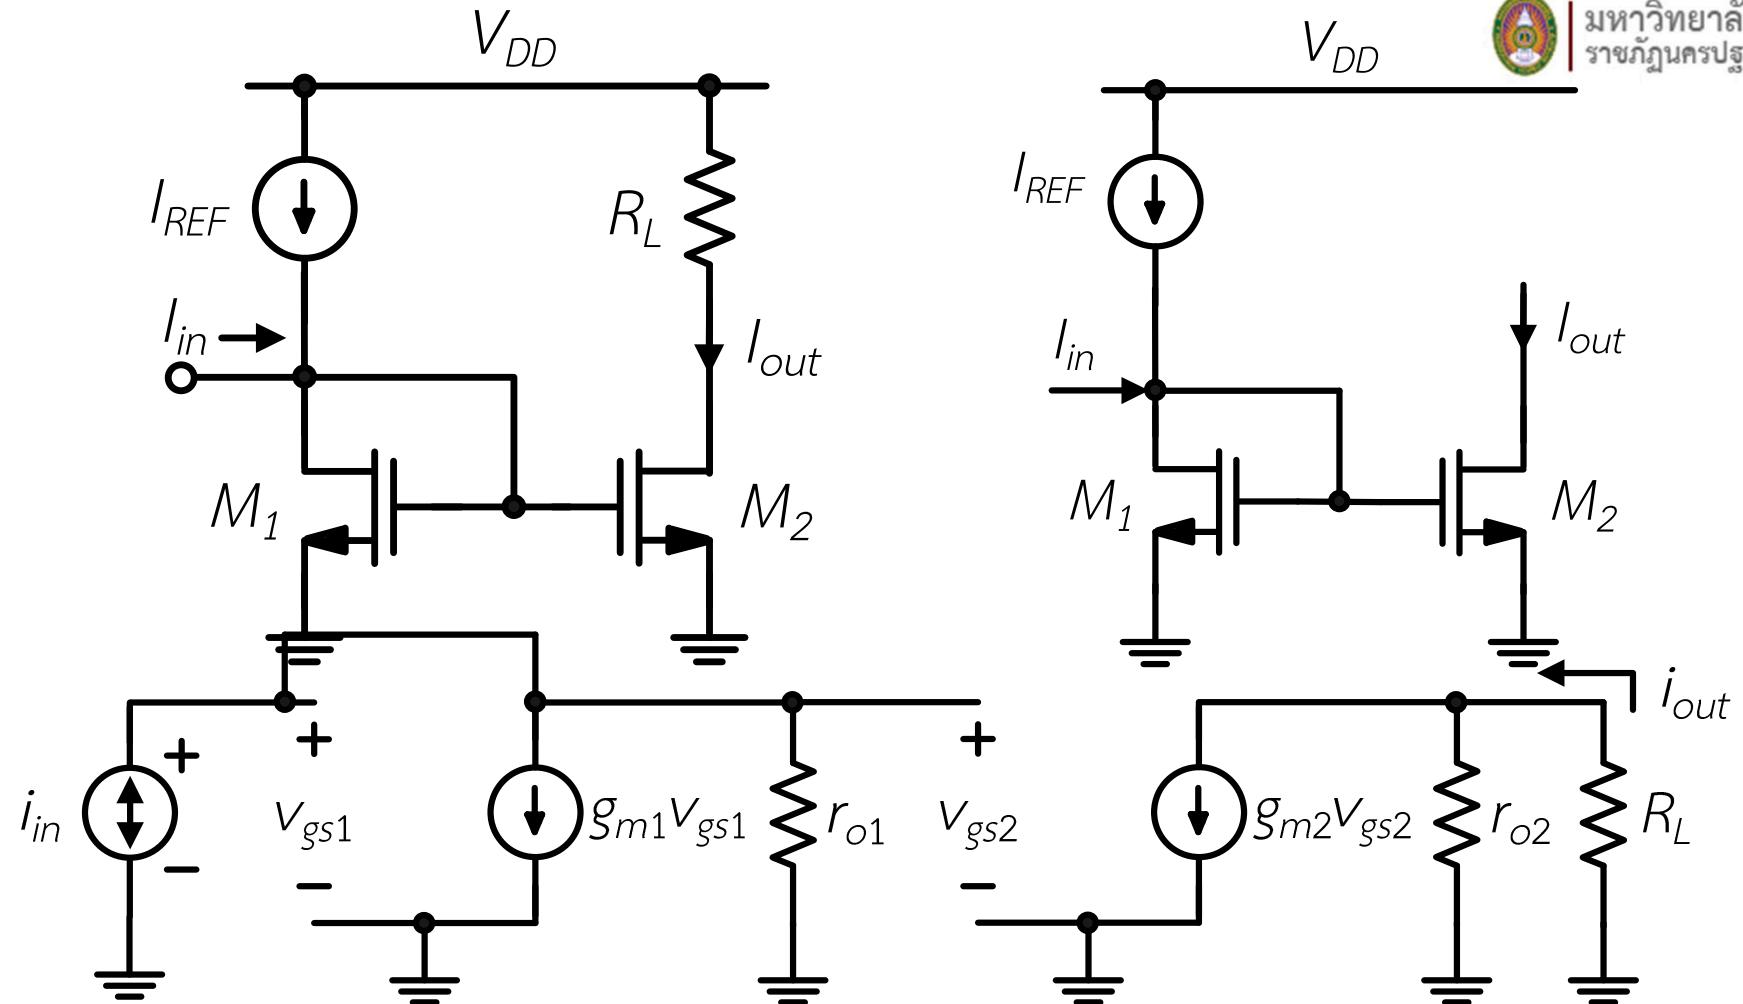

$$A_v = \frac{V_{outd}}{V_{ind}} = -g_{m1,2} \left( \frac{1}{g_{m3,4}} \parallel r_{O1,2} \right)$$

$$R_{out} = r_{O2}$$

$$\frac{i_{out}}{i_{in}} = \left[ g_{m2} / g_{m1} \right] = \left[ K_{N2} / K_{N1} \right]$$
